<sup>4</sup> Institute of Health Information and Statistics of the Czech Republic

<sup>5</sup> Department of Demography, Faculty of Science, Charles University

The study was supported by IGA MZ CR NJ 6491-3

## **Objective:**

To study the frequency of registered congenital malformations (CM) in children after in vitro fertilization (IVF) and to compare it to that in spontaneously conceived children.

## **Design:**

A retrospective study of a material from Czech IVF and CM Registers, covering the 1995 – 1999 period.

## IVF outcomes

	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

## **Conclusion:**

This study shows pregnancy outcome after in vitro fertilisation and after naturally conceived pregnancy.

Among the ICSI children, we did not observe any increase in the general major malformations rates in newborns, or in the total malformations rates.

No differences in major malformations rates were observed in the different organ systems in ICSI compared to IVF.
